

# What is Gigawhite?

Gigawhite is a popular ingredient that is now widely used in skin care products that are dedicated towards treating hyper pigmentation related disorders. The ingredient is considered by many experts to be a natural and **side effect free alternative to Hydroquinone**.

## Banning of Hydroquinone

Hydroquinone was one ingredient that took the skin care community by storm. It was considered a wonder chemical that created miracles for people with conditions such as dark spots, freckles, tanning and other hyper pigmentation disorders. It's low cost of production and its effectiveness prompted many skin care product manufacturers to use the chemical in their formulations. The results were astronomical. People with severe hyper pigmentation problems experienced magical results in less than 2 weeks. The compound effectively bleached the skin and reduced the production of melanin.

It was all going great until the FDA proposed a ban on the Hydroquinone in early 2006. The FDA revealed that clinical studies of rats revealed hydroquinone to be a substance that could possibly cause cancer. The cancer causing properties of hydroquinone among humans are yet to be proven.

But there were other side effects of hydroquinone discovered as well. People who indulged in use of skin care products containing hydroquinone were found to suffer from a condition called as **ochronosis**. Ochronosis is a skin condition where the skin loses its strength and become dark and thick. The condition was discovered to be prevalent on dark African men and women in both America and Africa.

The condition was also found in white men and women of Caucasian descent as well although the prevalence wasn't as common as their African counterparts. There were also other side effects that have been discovered. **Side effects include, but are not limited to:**

- Ochronosis – The skin condition that leads to darkening and thickening of the skin
- Increased levels of mercury
- Abnormal functioning of adrenal glands

As soon as the FDA issued a ban on the substance, skin care product manufacturers were forced to innovate if they wanted to stay in business and develop long-term relationships with their customers. Some companies succeeded whereas others failed.

# Discovery of Gigawhite

The banning of Hydroquinone has led to the discovery and widespread use of Gigawhite. It is one naturally occurring ingredient that is now used by the skin care community as a perfect **natural alternative** to hydroquinone. Clinical trials of the ingredient have been found it to be side-effective free and very effective when it comes to skin lightening.

The main reason Gigawhite is used in skin lightening products is because of its ability to inhibit tyrosinase. Tyrosinase is an enzyme that is mainly responsible for the production of melanin. When melanin productions are high, you suffer from hyper pigmentation issues.

## Components of Gigawhite

Gigawhite mainly comprises of extracts of **Swiss Alpine Plants**. Extracts include:

- Mentha Piperita Leaf Extract
- Primula Veris Extract
- Alchemilla Vulgaris Extract
- Malva Sylvestris Extract
- Melisa Officinalis Leaf Extract
- Veronica Officinalis Extract
- Achillea Millefolium Extract

## Clinical Test Results of Gigawhite

Clinical tests revealed Gigawhite to show a **decrease in discoloration by 24%** and an **increase in skin lightening by 15.3%** over the course of a period of 12 weeks. It was also discovered to be effective for reducing dark spots and other age spots.

**Here's a list of skin conditions Gigawhite is effective for...**

- Dark circles
- Age spots
- Sun burns and skin damages caused due to excess exposure to sun
- Reversing tanning
- Skin discoloration
- General skin lightening

If you've been suffering from any of the skin conditions mentioned above, we strongly encourage you to use a skin cream that contains Gigawhite and see the results for yourself. You will certainly experience significant changes in your skin tone in anywhere from 2 weeks to 12 weeks.

## AGAS contains Gigawhite

Unlike many other products that make use of ingredients such as Hydroquinone, mercury or steroids, AGAS relies on purely the best ingredients that have been lab tested to be side effect free and effective for hyper pigmentation disorders.

The best part about AGAS is that it not only works as an effective skin lightening, it also helps **moisturize and nourish your skin** thereby increasing its natural glow overtime. However, if you'd like to maintain your results, it is recommended to use a sun block of SPF 30 or higher and limit exposure to harsh sun.
