

### AGAS - Whitening Method of Action for Clinic

At the starting of the AGAS treatment first ask the patient to wash the treatment area with ample water

Step No	Product Used	Description
1	AGAS - AHA Cleanser	This is the first step of Whitening process, the small amount of Cleanser (1 ml) is taken and it is massaged over the treatment area of the patient until it get absorbed into the area over 2 minutes . Treatment area is cleaned with cold water using napkin. This is very important to note that no water should be used anywhere after this step of AGAS
2	AGAS Whitening Activator	Take small amount of the activator (1 ml) and massage over the treatment area over 2 minutes until it get absorbed , this step takes down the pH of the skin to 2.8 and make it ready for further treatment
3	AGAS Whitening Gel Exfoliator	Take small amount of gel and massage it over the treatment area for 2 minutes, gel contains apricot kernel oil, lemon tree oil, duanilelia seaweed extract.
4	AGAS Whitening Boosting Mask (Face & Eye)	Apply the thin layer of mask (face & eye) onto the patient & keep it for 20 minutes, only after then massage & absorb the face & eye mask into the treatment area, extra amount can be wiped with tissue paper or napkin
5	AGAS Whitening Nutrition cream	Apply small amount of nutrition cream onto treatment area (don't massage it yet) take 2 drops of activator & massage both nutrition cream & activator onto the face until it get absorbed.
<p>Don't wash the face at least for 6 hrs after the AGAS treatment Step 2 &amp; 3 can be combined together Before applying mask one can use Geosmatics leave on peels (Ferulico &amp; mandelico) to get added glow to the AGAS treatment</p>
